

TIP

Silicone naturally sticks to glass, this is what makes it an excellent sealant. If you "fog" the inside of the cap, like when you are cleaning a pair of glasses, it will be much easier to put the cap on the bottle.

QUICK START GUIDE

v1.0

Thank you for your purchase.

OPEN

If you are like us, you try to minimize the amount of plastic in your life. This is why we make our caps from a safe material, like silicone. With silicone, there is no need for excessive twisting, just use the tab to open your bottle.

CLOSE

This needs a little practice, but don't worry, it's easy. Push the cap firmly down and turn it back and forth a few times. This will help the cap find its place. If the inside is moist it glides much easier.
💡 See tip on reverse!

ALIGN

Just like with regular caps, our cap needs to be put on correctly in order to provide a leak-proof seal. Make sure it is not crooked or lopsided, and that it lines up with the bottle's neck ring, similarly to the image above.
